

HART Railroad — Session 2 Staging Board

15 cars in physical staging · DB session_nbr = 2 · Generated for operators

How to read this: **Current** = where STS says the car is now. **Next** = from *database* (waybill + shipment), not switch lists. Cars marked **POOL** have no session-2 work — correct at the yard until order-generation runs in a later session. Cars marked **ASSIGNED** have waybills but are not on switch lists because they sit in the home yard pool, not on an active local consist.

Not on session 2 switch lists or waybills: expected — lists only cover active session-open dispatch (28 cars on D749/NVL/CK1/STG jobs). **Next moves for assigned cars:** from DB state only. **Pool cars:** shipping intervals + order-gen at a future session open.
